

The Oloid is an unusual spatial geometry discovered by polymath Paul Schatz (1898-1979) that was formulated from his previous discovery of the inverted cube. When set in motion it creates a mesmerizing meandering path where although its shape is curved, it moves in a

perfect straight line. The form is conceived around two congruent circles, placed perpendicular to one another and with the centre of each intersected by the circumference of the other, the surface area and mass equal to a sphere. The mathematical perfection and smooth surface is satisfying and soothing to touch. The object invites contemplation of the sublime or a simple fidget. Each Oloid is individually crafted and has it's own shades and pattern. Oloid comes in a gift box complete with a pamphlet.

Bridging the gap between artistic and scientific activities, Paul Schatz (1898-1979) was an innovative sculptor, author, astronomer, mathematician and engineer who sought to bring harmony between nature and man. The greatest discovery he made when he inverted the cube resulting in a three-dimensional body whose laws and properties he called the oloid. Understanding the complex movements of the oloid's kinematic inversion led him to see this form as having numerous industrial applications, the first and important success were mixers for industrial and pharmaceutical applications all over the world. Schatz's oloid shape when spinning has been used for numerous patents ranging from water pumps, water propulsion and water agitators that do not harm fish as the rhythm simulates the fin motion of aquatic species.
